> Sole Agents for the U. S. and Canada NOTICE.

Startling Facts.

M. Gustave Le Bou, the famous French chemist, has been carefully experimenting with tobacco, and states that he finds in some kinds of tobacco a new alkaloid called collodine, which is a liquid of agreeable and very penetrating odor, and as poisonous as nicotine. He finds that the tobaccos containing the most collodine and prussic acid are those of Havana and Turkey. The proportion of nicotine absorbed by smokers varies, but hardly ever falls below fifty centigrams to the hundred grams of tobacco burnt, and it is the absorption of these poisons in small quantities that makes smoking injurious to so many people.

In cigarette smoking the effects are more rapidly developed, because of the rapid burning of the tobacco. A leading American scientist, in an article on the dangers of cigarette smoking says: "Abroad the excessive smoking of tobacco in the form of eigarettes is not a menace to life or the nasal organs, because the consumer rolls his own cigarette. He is thus assured of pure tobacco and unprepared paper, while the vile stuff contained in nearly every American cigarette is ruining the health of our men and boys."

Cotton paper is largely used, and is manufactured from filthy scrapings of rag-pickers. Vile as it is, it is bought up in great masses by manufacturers. who turn it into a dingy pulp and subject it to a bleaching process to make it presentable.

The lime and other substances used in bleaching have a very harmful influence on the membranes of the throat and nose, and are frequently the prime cause of the throat and nasal troubles which follow cigarette smoking

Rice paper is the only cigarette covering which is not injurious, and as this is expensive, it is but little used, although claimed to be by nearly every manufacturer. A full knowledge of the

fact that most of the American cigarettes are positively injurious by reason of the poor tobacco and pernicious paper used, as well as from the large addition of deleterious drugs has induced Messrs. W. T. Blackwell & Co., the famous smoking tobacco manufacturers, to put on the market a pure cigarette, called "Blackwell's Ball Durham Cigarette." In this they use only the purest and best tobacco and genuine imported rice
